

# Component Header Item

Very simple to use:

1. Create a static method with only one `Rect` parameter.
2. Add `[ComponentHeaderItem]` Attribute.

```
[ComponentHeaderItem]
0 个引用
private static void YouMethodName(Rect rect) { }
```

```
[ComponentHeaderItem]
0 个引用
public static void YouMethodName(Rect rect) { }
```

Note: If there are no `Rect` parameters or an incorrect number of parameters or no parameter `Item` will not display properly
